Ngcobo goes for platinum

THE Kloof branch of the Centre of Computers 4 Kids recently issued its first platinum certificate in South Africa to Muntuwenkosi William Ngcobo.

The Kloof franchise of the organisation has trained and qualified the first adult student in South Africa to gain the new platinum certificate. This certificate is a precursor to the full ICDL (International Computer Driving Licence) international certificate recognised.

"Ngcobo came to us to gain a certificate in computer skills as part of his quest to enhance his qualifications. We arranged a course of instruction to suit his needs and in a short time he sat the exams and passed all seven modules," said Sally Wilkinson, a licensee at the Kloof branch.

Computers 4 Kids has been undertaking computer training for 15 years and their e-Learner system is recognised and endorsed by ECDL internationally and the ICDL in South Africa. The software is used by 460 schools internationally.

The Computers 4 Kids adult course covers typical computer programs needed by most people working in industry and business. These include IT basics, files and folders, word processing, spreadsheets, presentations, drawing, and web browsing and email. Gaining these skills earns them the platinum certificate. "We are shortly hoping to be able to offer the full ICDL course of instruction," added Wilkinson.

Sally and Fred Wlikinson together with Precious Ngcobo congratulate Muntuwenkosi Ngcobo on his achievement.
